## **PERMISSION TO USE**

In presenting this thesis of the requirements for a Master of Science in Information Technology (MSc. IT) from University Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of College of Art and Sciences . It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or make other use of materials in this thesis, in whole or in part, should be addressed to:

**Dean of College of Art and Sciences**

**University Utara Malaysia**

**06010 - Sintok**

**Kedah Darul Aman.**

## **ABSTRACT**

Mobile news service for can be obtained easily way and flexibility to access the rural news criteria at any time in any location that this service can provide. This research introduces a prototype "local news WAP/WEB application" that provides the people in the rural communities with the appropriate news services that could help those people to view the various news via this prototype. By using this prototype, the user of this service from the rural communities can easily get necessary information that makes those users in touch with the different news updating in these areas. The proposed prototype provide the user to post the occur news that related for these areas.

## ACKNOWLEDGEMENT

*By the Name of Allah, the Most Gracious and the Most Merciful*

Firstly, I would like to express my deepest sense of gratitude to my supervisors Assoc Prof. Dr. Wan Rozaini bt Sheik Osman and Assoc Prof. Dr. Chek B.Derashid for their patient guidance, encouragement, understanding, and excellent advice throughout this study.

I am deeply and forever indebted to the people in my life that touched my heart and gave me strength to move forward to something better. The people who inspire me to breathe, who encourage me to understand who I am, and who believe in me when no one else does. I dedicate this study to the mountain that bore all the storms and conditions for my sake, to my father (Ahmad Ali Almsie'deen) and to my brother (Rami Ahmad Almsie'deen), and to the source of my light and pleasure to the one who enlightens my life, to my dear mother, to my sisters and my brothers.

Finally am also thankful to all my colleagues and friends in Jordan and UUM, especially from the Faculty of Information Technology for their help and support, with whom I shared pleasant times.

## **CHAPTER ONE**

### **INTRODUCTION**

#### **1. INTRODUCTION**

Most of the rural communities areas are dispersed in different locations and derived or lag behind urban counterparts, this make it hard for the community to access the digital technologies, and share of the benefits as in urban. Otherwise the rural communities should have access to these facilities through a TC and broadband telecommunications infrastructure.

However many studies have identified the problems in these areas such as the internet accessing where only 30% of students have the accessing to the internet in the nation area. The Telecenters are usually designed to provide a combination of ICT services, ranging from e-mail to full internet and World Wide Web connectivity (Harris et al, 2001).

The mean of the rural is the areas can be large and isolated, in another words its mean that areas which distinct from more intensively settled urban and suburban areas the places outback lands that unsettled (Thomas & Ricketts, 1998).

Mobile phones are a usable solution in the rural community because the majority of them use this device; the computers and internet are not available in the rural community. This

The contents of  
the thesis is for  
internal user  
only

2. The WAP prototype and web prototype was tested using localhost server, namely IIS. But with limited financial resources no actual web server can be utilized in testing the prototype.

#### **6.4. FUTURE WORKS**

The Mobile News Application for the Rural Communities is to enable the rural to watch the favorite news that they want as well as necessary information about the news update such as the cost of the tickets they reserved, and to allow them also to book for two ways (go and return). A lot of works still need to be done on this application in the future such as brows the news that support the multimedia features, and sending messages from the administrator to the rural incase there are some changes occur for the journey that the rural reserve on it, to inform him/her about these changes.
